## Project Design Phase-II Solution Requirements (Functional & Non-functional)

| Date          | 16 October 2022                        |
|---------------|--|
| Team ID       | PNT2022TMID08469                       |
| Project Name  | Smart Farmer-IOT Enabled Smart Farming |
|               | Application                            |
| Maximum Marks | 4 Marks                                |

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | <b>Functional Requirement</b> | Sub Requirement (Story / Sub-Task)                     |
|--------|-------------------------------|--|
|        | (Epic)                        |  |
| FR-1   | User Registration             | Registration through Gmail                             |
|        |                               | Registration through phone number                      |
| FR-2   | User Confirmation             | Confirmation via Email                                 |
|        |                               | Confirmation via OTP                                   |
|        |                               | Confirmation via verification link sent to registered  |
|        |                               | mail id  |
| FR-3   | Roles and service             | Choose roles (ex: farmer, student etc.)                |
|        |                               | Enter the personal details.                            |
|        |                               | Choose the type of service or options (ex: irrigation, |
|        |                               | pest management, crop management etc.)                 |
|        |                               |  |
| FR-4   | Terms and conditions          | Accepts the terms and condition for the chosen role    |
|        |                               | and options  |
| FR-5   | Details of farm and plans     | Enter the details of farming land and vegetation.      |
|        |                               | Choose the crop you want to plant                      |
|        |                               | Choose the types of plans (ex: regular and premium)    |
| FR-6   | Details according to farm     | Check the weather information                          |
|        | information                   | Enter the soil nutrient and pH value                   |
|        |                               | Click SAVE   |
|        |                               | Soon the details will share to registered mail         |
|        |                               | Exit   |

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description  |
|--------|----------------------------|--|
| NFR-1  | Usability                  | A system is built for monitoring the crop field with<br>the help of sensors and automating the irrigation<br>system and helps the farmer to understand the<br>important aspects. |
| NFR-2  | Security                   | Applications must be designed with the security of their use in mind. This includes personal data and their user's well-being.   |
| NFR-3  | Reliability                | It allows farmers to maximize yields using minimum resources such as water, fertilizers, seeds etc.  |
| NFR-4  | Performance                | It increases efficiency and reduce the environmental impacts and to implement technology properly to minimize cost.  |
| NFR-5  | Availability               | This concept focused on providing the agricultural industry with the infrastructure to leverage advanced technology.   |
| NFR-6  | Scalability                | It provides the recognition of each object that makes up a solution and ensure communication.  The system must remain operational regardless.                                    |
